Key facts

body size
4.2-9.5 m³

compression
up to 1:5

Narrow design up
to car width

rotary drum made
of stainless steel

Our ROTO MUT rotary drum technology in combination with the compact design make our **ROTO MUT mini** your ideal companion in narrow streets, small driveways or parks - anywhere a normal vehicle cannot get to.

Maneuverable & spacious

By integrating the attachment frame into the rear section, we shorten rear overhang and optimize the axle load ratio. That creates space for various body variants and additional features to meet your specific demands.

Choose the body you need

You can get your ROTO MUT mini with body sizes between 4.2 and 9.5 m³ and in two design variants:

Styling Design

- + Cladding for additional noise reduction

Naked Design

- + exposed rotary drum
- + conically shaped transition plates at the rear as protection

Everything you need, nothing you don't want

Our ROTO MUT mini comes with many additional features to make your life easier and your tours more efficient. However, you can choose only those features, you really need:

+ turn assistance system	+ „Clean Air“ air filter system
+ driver assistance system	+ container for special tools
+ camera system for 360 all round view	+ extended service and care package
+ extended lighting
